

Microscopic eyepiece with 10x magnification and a diameter of cast 23mm equipped with a millimeter scale allowing for measurements of observed samples. The eyepiece is used for precise settings and measurements - before using the eyepiece, the eyepiece should be calibrated using a micrometer slide. Calibration should be performed for each microscope lens - as a result we obtain the micrometer scale parameter for a given microscope and lens. Basic features and parameters ∅ magnification: 10x ∅ field of view: 18 mm ∅ net: the smallest scale is equal to 0.1 mm ∅ Luminair diameter: 23 mm Warranty 2 years
