

teleskopy.pl

Orion GoScope III 70 is a telescope for beginner sky viewers, great for children. Easy to carry, equipped with a height adjustable aluminum tripod and a transport backpack to which the entire set is placed. In addition to astronomical applications, it can also be used as a viewing telescope (it gives the picture a terrestrial, uninverted image). The set can be extended with glasses for higher magnifications. You will see very clearly through this telescope impact craters on the moon, the phases of Venus and Mercury, the four moons of Jupiter and the ring of Saturn, the Andromeda galaxy and the Orion nebula, numerous clusters, galaxies and nebulae. During the day, the telescope can become a companion for walking in the forest and observing nature, birds and distant terrain formations. Orion is an American optics manufacturer that for several decades has been providing high-quality instruments for both beginner observers and advanced amateur or university observatories. Technical parameters

- Optical system: refractor (achromatic doublet with air gap)
- Lens diameter: 70 mm
- Focal length of the lens: 400 mm
- Lighted: 1 / 5.7
- Optics: glass (flint, crown)
- Wastwas: FC (fully coated)
- Switching capacity: 1.65"
- Theoretical range: 11.9 mag
- Maximum useful magnification: 140x
- Weight: 1.6 kg

Usage Moon the planet star clusters nebulae scenery Equipment The set includes the following accessories:

- 1.25" rack & pinion spectacle
- K20 mm (over 20x) and K9 mm (over 44x) glasses
- 1.25" standard, 50° own field of view
- optical aiming scope 5x24
- aluminum photo tripod (azimuth mount,

126 cm maximum height, composite length: 42 cm) ~~â€¦~~ 1.25 "45 ° angled insert ~~â€¦~~ backpack for transport and storage
Warranty 12 months
