

Orion Shorty is a 2-time Barlow in the 1.25" frame - achromatic, bent down, very short, carefully made optically and mechanically. What are the benefits of using the Barlow lens? The basic benefit of using Barlow's lenses is that they allow you to limit the number of glasses while providing a large span of available magnifications. For example, having 2 glasses with 30 and 15mm focal lengths, we use the Barlow lens to get two additional magnifications corresponding to 10 and 5mm focal length spectacles. In addition, the Barlow lens does not change the eye-shadow offset of the eyepiece (eye relief), allows you to focus farther away from the tube (when you have a problem with sharpening the image) and allow you to extend the focal length twice while taking pictures of the sky in the lens focus. Technical parameters: Multiplicity: 2x ∅ Diameter of binding: 1.25 inches ∅ Anti-reflective layers: MC ∅ Construction: 2 elements (achromatic) ∅ Aperture: 22 mm ∅ Height: 7.9 cm ∅ Weight: 82 g Warranty 1 year HOW TO FIX THE LIGHT TELESCOPIC LENS
