The Camrock FastStrap CS50 duo reporter belt is a solution for people looking for a convenient and safe way to hang one or two cameras at the same time. This is an extensive version of the CS40 bar. The carrying system of Camrock FastStrap straps has been designed to minimize the time needed to reach for the camera and take a picture. The camera hung on the reporter's strap is close to the hand, and the movement needed to lift it to the eye is natural and

fluid. Transferring the load from the neck to the shoulder also improves the comfort of many hours of using the device, eliminating neck pain. Belt packs made of nylon with a high density of weave guarantee the safety of suspended equipment. Their adjustable length allows for quick adaptation to their own preferences. The shoulder part of the strap has been profiled with comfort in mind and made of a pleasant to the touch material that prevents the clothes from slipping. The CS50 duo has been equipped with a belt under the arm, keeping the whole place firmly in place. You can attach an additional element to the belt allowing you to hang the second camera. The movement of the devices on both straps can be locked in the selected position by means of stops. The Camrock FastStrap CS50 duo allows quick detachment and attaching the devices to the belt using metal hooks and fastening screws (screwed into camera stand mounts). Characteristics / parameters

- the possibility of hanging one or two cameras
- weight: 180 - 250 g
- length of the main bar: 128 - 168 cm
- main belt loading: up to 2 kg
- length of the additional strip: 30 - 164 cm
- additional belt load: up to 1 kg
