

Wireless remote control for Feiyu Tech WG and WGS gimbal. The remote control is equipped with a function button analogous to that on the gimbal bracket. It allows you to choose an option and switch between the device's operating modes. The built-in LED indicates the current mode of the stabilizer. Next to the button there is a joystick that allows you to set the camera in the desired position. The remote control has a built-in rechargeable battery charged by means of a micro USB cable. The pilot communicates with the gimbal via the receiver placed in the mini USB port of the device. The range of the pilot in the open area is about 15 meters. Note: the functions offered by the dependent remote control are from the gimbal model with which it works. Parameters / specification remote - dimensions: 7.6 x 3.4 x 2.2 cm - weight: 25 g receiver - dimensions: 2.3 x 2.3 x 1.8 cm - weight: 5 g - compatibility: Feiyu Tech WG and WGS gimbals with micro USB port - contents of the set: remote control, receiver, USB - micro USB cable
