Newell AABAT-001 lithium-ion battery dedicated to GoPro Hero 5 Black and Hero 6 Black sports cameras. It is a high-quality replacement for the GoPro AA-BAT011 system battery. The large capacity of 1220 mAh guarantees long power supply on one charge. Thanks to the use of microprocessors and the latest technology of lithium-ion cells, the battery is free from the so-called "memory effect". This means that the Newell AABAT-001 can be recharged at any time, regardless of the state of its charge. Recharging the battery has no effect on its capacity or its service life. The built-in microprocessor supervises the temperature of the battery during charging, protecting it from overheating. The solidly casing protects the cell and electronic components against mechanical damage. The batteries are completely safe to use. Newell brand batteries work with both the GoPro system chargers, Newell chargers, as well as with substitutes from other manufacturers.
