The heating band is designed for cooled ZWO ASI cameras. It prevents the build-up of dew on the front parts of the camera inlet, the matrix and the window. The kit includes a heating strip, power cord, two spacers and a cable tie. The thickness of the heating strip is 0.2 - 0.3 mm. The power cord can be connected in series with the power supply for the camera's cooling system. The two spacers are 0.3 mm and 0.5 mm thick, and are used with the EFW filter wheel at the same time. The recommended amperage is 0.35 A at a voltage of 12 V, which provides a heating power of 4.2 watts. When using the power supply to a cooling system and a heater at the same time, make sure that the current does not exceed the recommended one. guarantee 24 months HOW TO APPLY THE BAND? remove the adhesive tape protection stick the heating strip on the front of the camera, making sure that the black power cord is placed next to the

camera power plug / DC on the back of the camera body / Use a cable tie to fix the black wire to the camera body plug in the power cord; The heating band is ready for use and will prevent the build-up of dew on vital camera components
