The Bresser MESSIER NT-130S, 130/650 OTA telescope is an instrument characterized by large possibilities of collecting light and moderate price. A classic reflector with a diameter of 130 mm collects 30% more light than 114 millimeter reflectors from the same price range. The telescope's optics provide very good images free of aberration and allow for planetary observations and deep sky objects. This telescope offers a clear, flat field of view and can be successfully used by astrophotographers. Technical parameters Optical tube ∅ Lens diameter: 130 mm ∅ focal length: 650 mm ∅ luminous:  $f / 5$  ∅ maximum useful magnification: 260 times ∅ minimal useful magnification: 24 times ∅ optical system: Newton's reflector ∅ star range: 11.5 magnitudes ∅ tube length: 610 mm ∅ resolution: 1 " ∅ finder: 6x30 ∅ White color Glasses ∅ 26 mm SP (1.25 ") for 30x magnification Weight: 4 kg Warranty 2 years
