

Levenhuk Zeno Gem M13 - a small magnifier with high magnification. It is folded, so the lenses are better protected and can be used like a normal flashlight. In the middle there are two lenses hidden - one large one with a magnification of 30x and a smaller one with a magnification of 45 to 60x. The lenses are made of high-quality optical plastic, which guarantees high resolution of the image. The magnifier was additionally equipped with LED and UV lighting. The above-mentioned features give this magnifier great versatility and make it a great tool. Technical parameters
