Levenhuk Karma Plus is a family of binoculars that offer one of the best parameters in its price class. This series is a development of the very popular Levenhuk Karma models, which have a more advanced optical system and significantly improved ergonomics of use. The Karma Plus 8x42 model is an excellent choice for active users who require the highest image quality combined with a compact and light body structure. Lenses with a 42 mm aperture provide a bright image and high twilight efficiency, while covering the optical system with a full multi-layer coating eliminates glare and significantly improves the contrast. The Karma Plus 8x42 model is equipped with silver-coated roof prisms. Thus, the user can enjoy good color reproduction and a natural, vivid picture. The optical system is closed in a sealed housing, which was additionally filled with dry nitrogen. This procedure allows you to eliminate the problem of moisture condensation inside the binoculars, even with a sudden change in temperature. The body itself is covered with a layer of rubber, thanks to which its grip is always secure, and operation is extremely comfortable. A distinctive feature of the Karma Plus series binoculars is a wide adjustment range, allowing each item to be perfectly adjusted to the individual preferences of the user, both in terms of diopter adjustment and the interpupillary distance. Highlights of Levenhuk 8x42 Karma Plus Binoculars " roof prisms made of BaK-4 glass " lenses with a diameter of 42 mm " wide field of view " wide range of diopter adjustment and interpupillary distance " light and compact design " sealed body filled with nitrogen
