

teleskopy.pl

Telescope for a good start in astronomy - Newton's headlamp with a significant diameter of 114 mm and excellent performance. Compact design and Dobson type table mounting allow you to take the telescope for every trip under the darker sky, and the observation capabilities of this telescope include both the Moon and planets of the Solar System, as well as distant clusters, nebulae and galaxies - not just the brightest ones! In addition, it is a very good telescope for observing airplanes at cruising altitudes. In the set with a good quality telescope a collimator finder and two Kellner glasses. It is worth noting that the optical tube is equipped with a standard rails (dovetail) and can be quickly detached from the assembly. It also allows the use of mounting with other tubes / telescopes and, for example, with binoculars (after fitting the binoculars with, for example, dovetail-L), and also with spotting scopes, cameras, etc. OFFERED TELESCOPIC LANDS TO START OBSERVATIONS IN THE FIRST FALLING NIGHT - INCLUDES ALL NECESSARY ACCESSORIES

Technical parameters

- optical design: Newton's reflector
- Lens diameter: 114 mm
- focal length: 450 mm
- light: 1 / 3.95
- maximum useful magnification: 230x
- collimation: the luminaire allows full collimation of the system
- eyepiece: 1.25 ", sliding
- tube length: 45.5 cm
- tube length: 14 cm
- assembly: Dobson's azimuth mount on Teflon washers with three legs
- height of a complex telescope: 55 - 66 cm (depending on the pitch of the tube)
- Base diameter: 31 cm
- weight: 4850 g

Elements of the set

- Newton's N-114 telescope
- K25 glasses (magnification 18x) and K10 (magnification 45x)
- Red Dot Finder collimator
