The TK25R & B flashlight is specially designed for use when hunting. It is very important to quickly find a sharpener in the dark. Thanks to the use of three colors of light in the TK25R & B flashlight, it becomes much easier. This model will also work during the implementation of tactical tasks or the performance of activities by the Police. The flashlight has a white light with a maximum lighting power of 1000 lumens, a blue light with a power of 60 lumens and a red light with a maximum power of 150 lumens. You should also pay attention to the range of lighting, which in the case of white light is as much as 225 m, and in the case of red light 132 m. Blue lighting makes it easier to detect paint on the bed and vegetation. The tactical flashlight switch and mode switch are located in the back of the flashlight body. Changes the colors of the lighting are made by turning the head. This system is very intuitive and allows you to quickly switch between lighting modes and changing the colors of the diode. TK25R & B is powered by powerful 18650 cells, but if necessary, there is an alternative in the form of two CR123A cells. Technical parameters - lighting power: up to 1000 lm - maximum lighting time: 110 hours - maximum range: 225 m - number of modes: 8 - lifespan of the diode: up to 50,000 h - source of light: Cree XP-G2 diode (R5) - power supply - 2 x CR123 or 1 x 18650 (not included) - Body diameter: 25.4 mm (1 in) - Head diameter: 40 mm - resistance to fall: up to 1 meter - waterproof: IP-68 - completely sealed against dust and protection against complete, continuous immersion in water under pressure - total length: 143 mm - weight: 156.5 g (without batteries) Warranty 66 months (after registering at <http://latarki-fenix.pl/rejestracja-latarki>)
