The HMM series of Fenix's flashlights is a group of leading light sources of high reliability and high efficiency, useful in harsh environmental conditions. The flashlight is made of high quality aluminum, which results in resistance to dust, dirt, water, as well as provides increased resistance to low temperatures. What's more, the power source ensures long-term work, enabling long trips or mountaineering. The flashlight offers a maximum capacity of 500 lumens and a range of 80 m. HM50R is waterproof and does not give in to difficult conditions in dirt and dust (IP68 resistance class), it can be used as a mini hand torch when unplugged from the belt holder. Easy and quick battery charging is provided by the microUSB port, the battery level is indicated by a special indicator. The HM50R lens was made of transparent, durable, anti-reflective glass. HM50R provides flexibility and performance, which may be necessary in any climbing, mountaineering or any other activity in the field. Technical parameters: maximum lighting power: 500 lm range: 80 m maximum lighting time: 128 hours number of modes: 4 lens: ultra clear glass - chemically reinforced glass, with AR coating lifespan of the diode: up to 50,000 h body finish - anodized duralumin Premium III, black resistance to fall: from 1 meter waterproof: IP-68 - completely sealed against dust and protection against complete, continuous immersion in water under pressure power supply: 1 x CR123A (not included) or 1 x 16340 Li-ion (included) charging: via microUSB source of light - Cree XM-L2 (U2) LED dimensions: 67.5 x 33 x 28 mm weight: 63 g (without batteries) Warranty 66 months (after registration on the distributor's website)
