

The Fenix HL26R is a lightweight and compact headlamp with battery charging via a micro USB port. The headlamp has been designed to maximize its usability and ergonomics. The control buttons have been arranged in such a way that finding them is very simple, and changing the operating modes is smoothly without downloading the flashlight from the head. The reflective strip is equipped with a silicon insert, thanks to which the headlamp stays firmly in place during its use. This flashlight will work in sports, tourism and other activities that require good lighting and free hands. Technical parameters
