Telescopic arm 70 cm Superbee GEP070 for GoPro cameras, sports cameras and small cameras and cameras

Superbee GEP070 is a telescopic arm (boom) allowing the camera / camera to be moved up to 70 cm. Allows you to take shots from a further perspective. Useful when filming sports such as skiing, snowboarding, roller skating and many more. The Powerbee arm was made with great care using high-quality materials. The device has direct attachment to all GoPro cameras. Thanks to this, it ensures a high rigidity of the connection. The set also includes an adapter with a 1/4 inch threaded fastening. This allows the attachment of all small cameras and cameras with a 1/4 inch tripod thread. The slide lock is made by turning the arm. This ensures a fast and reliable change in length. The head of the device can be adjusted (changing the angle of the camera / camera mount). The handle is equipped with a wrist leash and an internal 1/4 inch thread, allowing the arm to be mounted, e.g. on a tripod. The arm fits all GoPro Hero cameras. The long screw does not rub against the waterproof case during assembly. Fits, among others down: GoPro Hero6, 5 (all versions) HERO4 (all versions), Classic, Hero3, Hero3 +, Hero3, Naked and all small cameras and cameras with a 1/4 inch tripod thread (Sony, Drift, JVC). The set also includes a mobile holder , an adapter for smartphones. This is a great product for the owners of modern mobile phones with built-in cameras. Thanks to it, you can attach your phone to any photographic tripod, from monopods to professional ones. The handle allows you to make precise panoramas, evening photos and low light conditions without moving the image, as well as shooting movies without vibrations. If there is a camera in your pocket, the possibilities and quality of which do not differ from digital cameras, why not use it? Technical parameters
