

The Levenhuk LabZZ CM2 compass is a reliable tool to determine your location using the map. Thanks to this wonderful device, the child can learn about the world's directions and find the way. The young traveler will always find his way, both in the city and in the field, and will be prepared to use professional navigational instruments in the future. The scale displays information in two units: degrees and thousands. The directions of the world are clearly marked, and the large arrow points north. The reticle with the magnifying lens helps you determine the direction. The thumb loops on the bottom of the body allow you to hold the compass firmly during your observation. The body, cover and slide are made of plastic. Warranty 2 years shop warranty, lifetime manufacturer's warranty
