

# teleskopy.pl

Levenhuk Skyline 70 Travel is a telescope for beginner sky viewers, great for children. Easy to carry, equipped with a height adjustable aluminum tripod and a transport backpack to which the entire set is placed. In addition to astronomical applications, it can also be used as a viewing telescope (it gives the picture a terrestrial, uninverted image). The set can be extended with glasses for higher magnifications. You can see very clearly through the Skyline Travel 70 telescope impact craters on the moon, the phases of Venus and Mercury, the four moons of Jupiter and the ring of Saturn, the Andromeda galaxy and the Orion nebula, numerous clusters, galaxies and nebulae. During the day, the telescope can become a companion for walking in the forest and observing nature, birds and distant terrain formations. Technical parameters
