

Imagine a sky sparkling from stars just above your head as you sit on the sofa. The Sega Toys Homestar Original Planetarium fulfills this dream. High-resolution image is created by using a powerful and very bright 3-watt diode in the projector. The projector's bowl is rotatable, so it allows you to recreate the image of the sky over night and year. Included are two interchangeable fixed north hemisphere fixed discs that allow viewing stars or a constellation map, depending on the user's needs and willingness. The "falling star" function - imitating a meteor - looks beautiful, and some believe that also artificial meteors can fulfill your wishes. The automatic timer function - timer - lets you fall asleep while observing the stars, and the planetarium will turn itself off. The planetarium has the ability to change the focus

setting for different distances and the slope / time of projection. Characteristics 60,000 flickering stars ultra-bright 3 W LED falling star function projection distance: from 150 to 230 cm Projection diameter: 270 cm in the set: planetarium, power supply, two interchangeable discs (stars and constellations of the northern sky) Warranty 2 years
