The Vortex AR15 boost with the MT-5108 quick release lever enables the use of a collimator on the AR-15 type "flattop" rifle and its combination with mechanical aiming devices. The use of the Vortex AR15 height allows the collimator to be mounted on a Picatinny rail at 1/3 co-witness or co-witness. This makes it easier to set the collimator sight in a position perfectly suited to the height of the sighting devices used in the AR platform carabiners. Height for Vortex collimators: - Vortex Razor collimator 1/3 co-witness - Vortex Sparc co-witness collimator Features / parameters - increases by 15.3 mm above the surface of the base - a minimum weight of 85 g - automatic lever lock - simple assembly and adjustment - the locking lever can be closed in two directions - solid and precise execution in CNC technology - 6061 aluminum with HA-III hard anodised coating
