

# teleskopy.pl

Discovering the sky is a hobby for space lovers of all ages. The changing positions of the constellations provide observers with impressions throughout the year. A well-known astronomy promoter, Przemysław Rudź, describes 59 constellations in the guide - their stories, features and the most important stars and objects within their range. Detailed sky maps will help you locate stars in the sky in individual months, and the content in the introduction will prepare you for observing the sky. Additional information Format: 17 x 24.5 cm Volume: 190 pages Cover: hard ISBN: 978-83-7845-873-9 Release year: 2015
