

teleskopy.pl

Angle built on the basis of a pentagonal prism, with MC covers and dielectric in the 1.25" standard. It offers a large active aperture - 29 mm - so it does not even vignette with long-focal glasses. It straightens the image both up / down and left / right. Why this angle connector? Unlike mirror connectors, the pentagonal prism gives the correct image not only up / down, but also left / right. At the same time, it does not show a clear scattering line typical for Amici prism fittings - "spike". It is also the only well-functioning prism with the Orion Premium Linear BinoViewer binocular connector, allowing for obtaining a completely earthly, real image orientation. The optical layers are noticeable: MC on two transmission surfaces and dielectric on two reflection surfaces. Technical parameters ∅ breaking angle: 90 ° ∅ construction: pentagonal prism ∅ Size: 1.25 inches ∅ optical coatings: dielectric MC ∅ glass: BK-7 ∅ filter thread: is, 1.25" ∅ eyepiece mount: compression ring ∅ optical length (backfocus required): 120 mm ∅ aperture: 29 mm ∅ weight: 255 g Warranty 12 months
