

The Fenix ALG-01 tactical mount enables Fenix flashlights to be mounted on rails in Weaver and Picatinny standards. The assembly was made of 6063TS aluminum subjected to the anodizing process, which creates a hard layer resistant to scratches and wear. The assembly allows mounting torches with a 25.4-26 mm tube, and after using an additional polymer insert also with a smaller diameter of 23.6-24.2 mm. Handle screwed on Picatinny or Weaver rails (22 mm wide) using 3 Allen screws. Rails are cheap on current units, but also on some night vision devices and telescopes. Allen key set and polymer adapter included. Technical parameters \varnothing clamp diameter for torch body: 23.6 - 26 mm \varnothing material: aluminum \varnothing weight: 45 g \varnothing producer: Fenix
