The Fenix T5T tactical pen is not only a great writing instrument, but also an effective self-defense tool. The Fenix T5T uses a high-quality replaceable Schmidt cartridge, thanks to which writing is carried out in a very light and smooth way, and the written text is clear and has a high saturation of black. The pen body is made of 6061-T6 aircraft aluminum, which is coated with HA-III anodizing with the highest resistance to abrasion and scratching. The extendable tip made of hard tungsten alloy means that the pen can be used as an emergency glass breaker, in self-defense and in tactical applications. Ejecting the refill and breaker is done by turning the appropriate tip of the pen. The Fenix T5T has a clip for easy carrying and attaching to luggage or equipment. An individual serial number is affixed to the top of the cap. Every fan of pens and tactical gadgets will appreciate the precision of workmanship that has been achieved thanks to the use of precision CNC machining. Fenix T5T will surely become the favorite pen of every pen collector, EDC lover and tactician, and people who like to own prestigious items. The set includes a nylon case for carrying the pen and two spare seals.
