Levenhuk Zeno Desk D0 magnifier is an irreplaceable help for anyone who performs precision work. It can be mounted on a table and is mainly used as a textile magnifier. This model is also suitable for applications related to the jewelry industry, repairing, assembling models and sewing. The lens is mounted on a tripod so that both hands are free. The lens angle can be adjusted as needed. The bottom part of the mount is a frame with inch and centimeter scale. Above the frame there are two diodes (LED) with adjustable brightness, and their light falls directly on the area under the lens. The lens is made of optical glass and provides 6x magnification. Details on small objects are clearly visible and chromatic aberrations are minimized. Levenhuk Zeno Desk D0 Magnifier is ideal for both home and professional use.
