The high-class Explore Scientific 8.5 mm (1.25 ") eyepiece with an ultra-wide 82 ° field of view and a large exit pupil distance offers an amazing observation experience with comfortable observation. These glasses have argon filling ensuring 100% water resistance. This prevents the formation of haze inside the glasses and makes them easier to clean. As a result, liquid cleaners are not able to get into the interior of the lens system. This protects the glasses and guarantees their long service life. In addition, the glasses of this series are equipped with a soft tilting eyecup ensuring comfortable observation. These glasses are an excellent choice especially for spectators wearing glasses. Technical parameters " focal length: 8.5 mm " binding: 1.25 "/ 31.7 mm " Field of View (AFOV): 82 ° " construction: 7 elements in 5 groups " offset of the exit pupil: 15 mm " coatings: EMD " Filter thread: yes, 1.25 "/ M28.5 x 0.6 mm " weight: 280 g  
Warranty 24 months
