

Newell AA 2500 rechargeable batteries were created to power devices with high energy consumption. These include flash lights, game controllers, electric toys, vehicle models and many more. By using Newell batteries, you can be sure that the devices will last much longer. 2500 mAh capacity Typical cheap AA batteries ("fingers") have a capacity of about 700 mAh. Newell offers batteries with 4 times higher capacity, which is 4 times longer without changing the power supply and charging. High quality The best quality cells were used for production. The capacity in milliamperes is real and ensures long life. The technology used allows to significantly extend the operation time of devices with high energy demand. Ready to use The batteries have been pre-charged and are ready for use after unpacking. Resistant to self-discharge According to the latest standard, AA Newell batteries are extremely resistant to self-discharge. Fully charged, they retain approximately 80% capacity after 12 months of storage. Environmentally friendly Newell NiMH AA have a life span of approximately 500 charging cycles. This significantly reduces the amount of waste compared to standard alkaline batteries. Many years of experience The Newell brand has been on the market for many years and has a long

list of satisfied customers among both professionals and photography enthusiasts. Includes 4 batteries in a blister pack
Technical parameters • model: NiMH AA 2500 • technology: nickel metal hydride cells • capacity: 2500 mAh • voltage: 1.2 V Warranty 24 months
