The transparent container with the magnifying glass placed in the lid 5x magnification is an educational toy for explorers interested in the world. The container is also equipped with an additional hinged ventilated lid thanks to which the observed objects can be placed. The container can be used to observe specimens of animate and inanimate nature such as leaves, grasses, plant roots, twigs, mosses, lichen, mushrooms, insects, stones, sand, shells, etc. You can also place various specimens living in the water. The container is equipped with a strap for convenient carrying and a tweezer for carrying specimens. It is worth taking it with you and even during an ordinary walk to learn the details of the surrounding world. Remember to release them after living observations. During observation, provide them with appropriate conditions. Technical parameters ∅ lens diameter: 38 mm ∅ magnification of the lens: 5x ∅ dimensions: 140 x 105 x 70 mm ∅ weight: 120 g ∅ manufacturer code: SGLP88712000
