The Fotopro X-go Chameleon tripod series has been designed for photographers requiring equipment of the highest quality and functionality, while maintaining compact size and mobility. It's the perfect choice for travelers and landscape photographers using lighter SLR or mirrorless cameras. Functional and compact set The X-go Chameleon is a solid, aluminum tripod equipped with a ball head and monopod function, as well as a "smaller brother" tripod from the Fotopro X-go Predator series. The maximum working height of the tripod with the installed head is 157.5 cm. At the same time, thanks to the possibility of reverse folding, the X Chameleon has small transport dimensions - only 43 cm. The tripod has a three-stage system of inclination of legs, which consists of four sections. Individual sections are blocked by a convenient to use rotary clamp system called T-Lock. Tripod legs are finished with spikes, which can be attached with non-slip rubber tips included in the set. This ensures the best grip, whatever the ground. The X-Chameleon tripod is equipped with a central column with the reverse mounting function. This solution is particularly useful in macro photography and in shots from the so-called "frog perspective". The thread at the bottom of the column allows you to install another head or hook on it, on which you can hang an additional load to improve the stability of the tripod. The double security system protects against accidental lowering of the column. Any tripod with 3/8 "or 1/4" mounting thread can be mounted on the tripod. To change the thread, move the screw using the included wrench. Durable ball head with a load capacity of up to 8 kg! The tripods from the 10th Chameleon line are equipped with the FPH-52Q ball head with a quick mounting plate in the Arca Swiss standard. The head has a set of three spirit levels to facilitate the leveling of the camera and a quick coupling lock to prevent accidental unplugging of the equipment mounted on it. The FPH-52Q has two precise and smooth knobs. One of them is used for blocking and adjusting the clamping force of the ball, while the other one blocks the movement of the rotational base of the head, which additionally has a 360 ° scale applied, which facilitates panning. The head, against accidental unscrewing from the tripod, is secured by a screw, tightened with the included wrench. Two in one - a monopod function Chameleon is not only a tripod. It also has the function of a monopod. After unscrewing one of the legs and the central column, we get a fully usable monopod, 155.5 cm high, with a comfortable rubber grip. Modern and unique design Among other tripods available on the market, Chameleon stands out not only with excellent workmanship and functionality, but also with an attractive and original look. The highest quality and guarantee of reliability Thoughtful design, the highest quality materials and precision of workmanship make the product will last for years. In addition, all Fotopro tripods are covered by a six-year warranty! Fotopro tripods from the X-go Chameleon series are an excellent choice for professionals and advanced photography enthusiasts who expect the highest quality of performance and high mobility. Technical specifications Fotopro X-go Chameleon tripod with ball head FPH-52Q • material: aluminum • maximum load: 8 kg • weight: 1605 g • maximum working height with the central column extended: 157.5 cm • maximum working height with lowered central column: 130 cm • minimum working height: 43.2 cm • height in transport position: 43 cm Tripod (specification not including the head) • color: orange-brown • material: aluminum • maximum load: 15 kg • weight: 1295 g • maximum working height with the central column extended: 148.5 cm • maximum working height with the center column lowered: 121 cm • minimum working height: 34.2 cm • height in transport position: 43 cm • number of leg sections: 4 • diameters of leg sections: 25, 22, 19, 16 mm • leg lock type: T-LOCK • three positions of leg spacing angles • extendable central column with the possibility of reverse assembly • platform diameter under the head: 42 mm • head mounting with a 3/8 "or 1/4" screw • non-slip tripod pads • spikes • hook Head (tripod specification not included) • head type: ball head • Orange color • material: aluminum • maximum load: 8 kg • weight: 310 g • height: 9 cm • base diameter: 43 mm • ball diameter: 30 mm • Arca-Swiss quick mounting plate with dimensions: 4.2 x 5 cm • 3/8 "tripod thread hole • three spirit levels • two lock knobs • angular scale Monopod (specification not including the head) • maximum height: 122.5 cm (155.5 cm - after extension with a central column) • minimum height: 40 cm • weight: 345 g (475 g - after extension with the central column) • maximum load: 5 kg Elements of the set • Fotopro X-Chameleon tripod (orange-brown) with monopod function • Fotopro FPH-52Q ball head with quick-mounting plate in the Arca-Swiss standard • a set of spare, non-slip rubber tips • cover with shoulder strap • a set of keys • weight hook Warranty 72 months (manufacturer's warranty)
