Illuminator invisible infrared emitter 850 nm 10 W is a compact hunting flashlight with a variable focal length, which effectively supports the operation of the night vision sight. IR light The flashlight emits an infrared beam with a maximum wavelength of 850 nm, practically invisible to the human eye. Such a wavelength means that the LED illuminator can effectively support the night vision sight, without disturbing the game. Zoom adjustment The flashlight uses a convex lens and a variable focal length (zoom), which allows for a smooth change of the width of the infrared beam. Depending on the situation, we can concentrate the light precisely at a distance of 200 or use a diffused stream and illuminate objects up to 100 m away. The beam can be adjusted by extending the head. Recoil-resistant design The body and the head of the flashlight are made of aviation aluminum alloy, which is characterized by low weight, high resistance to mechanical damage and weather conditions. The flashlight is compact and weighs only 140 g, so when mounted on a weapon, it does not increase its weight noticeably and can be conveniently carried at the belt. The porthole is IPX-4 waterproof, which means that the device is resistant to splashes, rain and temporary immersion in water. The device is resistant to the recoil of weapons, falls and weather conditions, therefore it can be safely used during hunting regardless of the weather and season. The switch for the emitter is on the back of the body. Double power supply The illuminator is normally powered by a 18650 rechargeable battery (not included), which, however, can be replaced with 3 AAA batteries, using the included adapter. Weapon mounting The set includes an aluminum mount, thanks to which the emitter can be quickly and easily mounted on the accessory rail of a night vision device or a weapon. Technical

parameters " emitter: infrared diode " emitted wavelength: » = 850 nm " mounting: included, for 22 mm / Weaver / Picatinny rail " power supply: AAA x 3 or 1 x 18650 " length: 162 mm " weight: 140 g Warranty
