The EQ5 (CG-5) equatorial mount offers exceptional stability and precision along with many other highly useful functions, useful for every, even advanced astronomer. The mounting head rests firmly on the wide mounting platform of the stainless steel tripod and is equipped with a useful table for accessories. The set also includes a leveling indicator (spirit level), adjustment of the latitude setting with a micrometric scale and an azimuthal adjustment of the polar finder scope for the polar star. The EQ5 also features engraved aluminum setting rings and micromovement knobs. The assembly can be optionally equipped with a polar finder and a drive in one or two axes. Technical parameters " lifting capacity: 10 - 13 kg (depending on the size of the tube) " height of the tripod (min / max): 84 cm / 116 cm " height of the tripod + head (max): 152 cm " leg spacing (at min / max height): 93 cm / 124 cm " head weight: 4.1 kg " weight of the tripod: 5.1 kg " counterweights: 2 pieces weighing 5.1 kg each " counterweight rod: weight 875 g / length 31 cm / diameter 20 mm " shelf for accessories: 390 g " total weight: 21 kg (without packaging) Accessories (included) " 1.75 "(44.5 mm) steel tripod / tripod with adjustable height " two 5.1 kg counterweights " shelf for accessories " polar finder integrated with the head Warranty 60 months (photos of the version without the polar finder)
