Recce Pro HD 8x32 is a light and handy monocular equipped with a reticle allowing for quick and precise assessment of the distance of the observed object. This monocular has the highest quality optical system made of low-dispersion HD glass, additionally covered with an anti-reflective Vortex XR " coating. Such solutions guarantee very sharp and contrasting images with perfect color reproduction. The casing of this monocular has been sealed, which guarantees its water resistance, and thanks to filling it with dry argon, the problem of the optics fogging during sudden temperature changes has been eliminated. For maximum protection, the lenses have been additionally covered with a layer of Vortex ArmorTek ", making them scratch and dirt resistant. This instrument is distinguished not only by excellent optics and a high standard of workmanship. It has been designed in such a way as to ensure the greatest possible comfort of use. The rubber-coated housing prevents the monocular from slipping, and the separate focus of the image and the mesh allows for a perfect fit to each eye. The most important features of the Vortex Recce Pro HD 8x32 monocular " optical system made of high-quality, low-dispersion glass ensuring the highest image quality and faithful color reproduction "

lenses covered with a full anti-reflective Vortex XR™ coating and a layer protecting against scratches Vortex ArmorTek™
