

# teleskopy.pl

The new BRESSER spectroscopy Spektar is characterized by a compact design and a new rapid focusing system. This telescope is great for observing nature, watching birds, traveling and during hiking trips. The universal range of 15x-45x magnification enables observation without the need for a tripod, although its use is recommended. Retractable sun visor / shading improves the comfort of observation during sunny days. The telescope was finished with a strong rubber, and the whole construction is waterproof. Technical parameters

- Zoom: smoothly variable, 15-45 times
- Lens diameter: 60 mm
- Optical system: achromatic lens + Amici prism
- Anti-reflective layers: green
- Linear field of view at 1000m: Dependent on magnification, 57 m at 15x magnification, 27 m at 45x magnification
- Minimum distance of observation: 5 m
- Dimensions: 290 mm x 80 mm x 120 mm
- Weight: 1250 g
