

teleskopy.pl

The new BRESSER spectroscopy Spektar is characterized by a compact design and a new rapid focusing system. This telescope is great for observing nature, watching birds, traveling and during hiking trips. The universal magnification range from 9 to 27x enables observation without the need for a tripod, although its use is recommended. Retractable sun visor / shading improves the comfort of observation during sunny days. Strong, rubberized housing guarantees high durability and resistance of the telescope. Technical parameters

- Zoom: smoothly variable, 9 - 27 times
- Lens diameter: 50 mm
- Optical system: achromatic lens + Amici prism
- Anti-reflective layers: blue
- Linear field of view at 1000m: depending on the magnification, 70 m at 9x magnification, 35 m at 27x magnification
- Minimum distance of observation: 5 m
- Dimensions: 200 mm x 90 mm x 110 mm
- Weight: 750 g
