Surprise your friends and give them unique sunglasses for observing the Sun! For a very affordable price, you get a high-quality ND 5.0 solar mylar foil, framed in intriguing frames. These glasses are the perfect accessory for anyone wishing to observe a solar eclipse. Filters block 100% of ultraviolet, infrared and 99% intense visible light. The holder is made of paper and can be easily recycled. Attention! These glasses are only suitable for observing the sun's disc with the naked eye! They are not suitable for observing the Sun with optical instruments! You must not look at them through binoculars, observation scopes, finders and telescopes, because it may cause damage or loss of sight! For this we use filters that are placed on the lenses of optical devices, which we also offer. Operation manual Put on solar eclipse glasses to protect your eyes from the sun's rays when you look directly at the sun or at its reflections. Wear glasses to observe the eclipse whenever ANY part of the sun's disc, even the tiniest part, is visible! This product should not be used in conjunction with other optical products such as cameras, telescopes, binoculars, etc. Children should only use this product under adult supervision. The glasses are suitable for both adults and children. Other information: SKU:
