

Photo adapter that allows you to connect the microscope to the body of a SLR camera. The photographic adapter allows you to take photos of microscope slides (digital or traditional). The adapter is placed in the microscope tube, and the threaded part allows the T2 ring to be attached to the camera (eg Canon EOS, Minolta AF, Sony, Nikon etc.). Long profile - the adapter allows you to install in the middle of the eyepiece in the frame of 23 mm, so that the user has an additional effect on the zoom and focal point of the image.
