The 20-60x (zoom) eyepiece for Swarovski Optik telescopes allows you to obtain magnifications in a wide range from 20 to 60 times. All SWAROVSKI OPTIK glasses are watertight and compatible with ATM / STM, ATS / STS and CTS range lunettes. The protective glass prevents the penetration of dust and dirt even after removing the eyepiece. The bayonet mount enables silent and easy replacement, the automatic locking system prevents accidental unscrewing. All glasses also have appropriate protective covers. The coating on the outer surface of the SWAROCLEAN lens has anti-adhesive properties, facilitating the removal of impurities from objective lenses and spectacles, primarily dried mineral residues (eg water stains after misting), insecticide and wood resin. Lenses can be cleaned with less intensity, which significantly increases the durability of optical products. Additional product photos
