Binoculars Nikon 12x50 EX are binoculars with high magnification, designed mainly for observation of birds and planes. The 12x magnification allows you to use your binoculars freely with your hand, while ensuring very good visibility of details. In the case of bird watching, large magnifications are used especially during flights, as well as for the observation of birds of prey, which are very difficult to approach. The Nikon 12x50 EX is also a good proposition for astronomical observations in urban and suburban areas, offering a 4mm relative exit due to the proper conditions when we do not have full darkness or a dark, rural sky at our disposal. It works well in observations of Moon details, star clusters and compact asterisms (eg "Wieszak"). All Nikon EX series (Extreme binoculars are characterized by a flat field of view, full water resistance (o-ring seal and nitrogen filling) and excellent chromatic aberration correction. Impeccable appearance and high quality finish will satisfy even very demanding users. Comes with a cover and covers for lenses and glasses. Usage astronomy Hunting planes nature scenery Technical parameters

- Lens diameter: 50mm
- Zoom: 12x
- Exit pupil: 4,1mm
- Minimum distance of observation: 7m
- Construction of prisms: porropryzmatyczna
- Material of defective elements: optical glass BaK-4
- Field of view: 5.5 °
- Linear field of view at 1000m: 96 meters
- Anti-reflective layers: MC
- Central focus adjustment Yes
- Can be mounted on a tripod Yes
- Weight: 1050g
- Usage
- astronomy
- hunting
- sailing
- observation of nature
- bird watching
- travels
